

### CONSUMER PRESS RELEASE FAGOR 6HV-585ATCX 45cm STEAM OVEN

Fagor is a leading international appliance brand that belongs to the Mondragon Co-operative Corporation, the world's largest co-operative group of companies. The latest collection of Fagor built-in and freestanding kitchen appliances incorporates stylish contemporary designs and includes a wide range of technologies that are both advanced, yet easy to use. All products benefit from a number of additional safety, energy and power-efficient features that make Fagor appliances an ideal choice for environmentally-conscious consumers, and for people with young families.

As part of its new Compact collection of 45cm ovens, Fagor introduces a new steam oven to its range. Steam cooking helps maintain the nutritional values of the food cooked within the oven as all vitamins and minerals are preserved. This enhances the flavour, colour and aroma of vegetables, fish and meat dishes. Many of the recipes cooked in a standard oven or microwave can be steamed as a healthy alternative and there is no transference of flavours when steam cooking, so a number of food types can be steamed simultaneously.

Featuring full electronic controls with temperature pre-selection, the red LED digital display has intuitive illumination and can be manually dimmed as a power-saving option. The oven requires no plumbing into the mains drainage and has a one litre removable water jar, with an audible warning when it needs refilling. Steam is generated from the bottom part of the oven, and is very quiet. There is an interior light and a child lock, for additional safety. There are eight manually adjustable pre-selected cooking functions: *Vegetables and Meat; large Fish; Small Fish, Baked Foods; Terrines and Re-heat; Melting Chocolate; Defrost fish and fruit; Defrost meat.*

#### Product Information:

Product:	Fagor 6HV-585ATCX
Finish:	Stainless Steel with Electronic Touch Controls.
Energy Rating:	N/A. Steam at 100°C = 0.71 kW/ Hr
Capacity:	23 litres
Oven Functions:	Eight pre-set functions: Vegetables and Meat; large Fish; Small Fish, Baked Foods; Terrines and Re-heat; melting Chocolate; Defrost fish and fruit; Defrost meat.
Additional Features:	Electronic control with temperature pre-selection
